customers

customer_id	first_name	last_name
1	John	Doe
2	Jane	Smith
3	Robert	Johnson
4	Sarah	Williams

products

product_id	name	price
1	Silk Blouse	89.99
2	Denim Jeans	79.99
3	Cashmere Sweater	149.99
4	Cotton T-Shirt	29.99
5	Wool Coat	199.99

orders

order_id	customer_id	product_id	order_date
1	1	3	2025-03-10
2	2	1	2025-03-12
3	3	4	2025-03-15
4	2	4	2025-03-18
5	1	2	2025-03-20
6	2	3	2025-03-25

Level 1: one table

1. Show the `name` and `price` of every product that costs less than $100.
2. Show the `name` and `price` of every product, sorted from most expensive to least expensive.
3. Show the `order_id` and `order_date` of every order Jane Smith placed.
4. Show one number: how many orders have an `order_date` on or after 2025-03-15.
5. Show three numbers: the average `price`, the highest `price`, and the lowest `price` of the products.

Level 2: more than one table

6. For every order, show the `order_id`, the customer's `first_name`, and the product's `name`, sorted by `order_id`.
7. Show the `first_name` and `last_name` of every customer who bought the Cashmere Sweater.
8. Show one number: the total of the `price` of the product in every order.

Level 3: totals for each group

9. For each customer who placed at least one order, show their `first_name` and `total`, the sum of the prices of the products they ordered.
10. For every customer, including any with no orders, show their `first_name` and `num_orders`, the number of orders they placed.
11. For every product, including any never ordered, show its `name` and `times_ordered`, the number of orders it appears in.

Think about it

12. Show the `first_name` and `last_name` of every customer who has never placed an order.
13. Show the `name` of every product that has never been ordered.
14. Show one number: how many rows there would be if every customer were paired with every product. Explain how you got it.
